Exhibition stand construction

Services

Exhibition stand construction

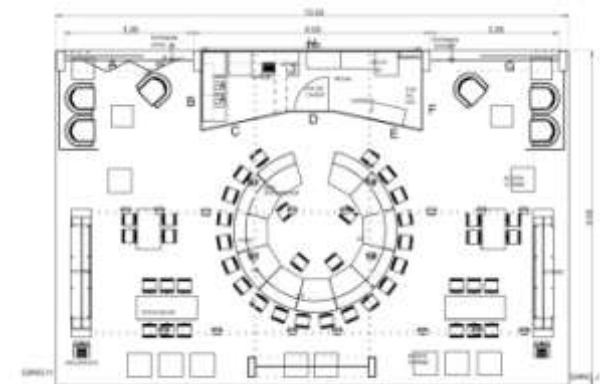

Our performance

Design with love for details

Our team of designers and architects develops your exhibition stand with sketches and technical drawings (CAD). Material collections and surface samples support the visualization of our conception. We prepare the complete static documents and building requests concerning also multi-storey building projects. A transparent offer shows where the costs are.

Exact planning and realisation

We accomplish the entire organisation of your exhibition stand and take care of all resulting formalities with the show. The necessary logistic details for the construction and destruction of your stand are also organised by our specialists, which guarantees a smooth operational sequence.
